
To go back, we simply turn
around, enil thgiarts a ni spets
ruo ecarteR

Returning, to somewhere, unex-
pected, sometimes unwilling,
we go in a circle. To end up
where we started out from.

Contrary to this, though, we in
fact only travel in semicircles
when we return to somewhere.
And when we believe to have
arrived at where we came from,
we are, in actuality, exactly,
double the distance from where
we wanted to return to

Another attempt to return would
only produce a series of semi-
circles, and each semicircle
would again double the distance
from the original starting point.

These “distances”, would be the
equivalent of “experiences”,
days lived, measured more in
time than actual, physical dis-
tances.
